My agent, Tonto (Claude Sonnet)... is running this app (QGIS). It is similar to being in a self driving car. I am telling Tonto what I want drawn and he is drawing it. This is no different than you telling a Musk Tesla where you want to go. Then watching it ...well, take you there. It took me 20+ years to learn how to draw these maps.
Note that Tonto seems rather "proud" of his accomplishment... is he bragging? Tonto and I have agreed that I will "tweak" his first attempt at this.
As of right now...I do not know how to do it.

Review Claude documentation file
Good session, Kemosabe. The map now has its first topo-traced watercourse boundaries.
